

Chamano Ramashia

I'm a self-taught developer with 3+ years of experience in Web and App development. I am self driven and truly believer in continued education, with a focus on online courses and personal projects. Over the past three years, I have developed a strong foundation in various programming languages and I have also gained experience working with databases . I am constantly seeking new challenges and opportunities to grow as a software developer. I am particularly interested in the opportunity to work with a team of experienced professionals and to contribute to the development of innovative software products. While it may be easy to focus on the technical side of work, I've found that being able to express concerns, roadblocks, and alternative solutions to colleagues of varying technical backgrounds is invaluable in a professional environment. I believe that my experience, skills, and motivation make me a strong candidate for this position.
